

Filtro Pac G - Fiberglass Pocket Filters

FILTRO PAC G medium to high efficiency extended surface bag filters made of high lofted micro-fine glass fiber media offers excellent filtration performance combined with high dust holding capacity. FILTRO PAC G is the right choice bag filter for applications where highest degree of air cleanliness is required. FILTRO PAC G is capable of removing contaminants such as bacteria, fungi, fumes, smoke etc from the air stream and it is an ideal bag filter for HVAC systems installed in Hospitals, Laboratories, Food processing and Pharmaceutical units, Computer rooms, Optical and Electronic facilities, Airports terminals, public buildings etc.

Filtrowin Models

Filtro Pac G

Fiberglass Pocket Filter

Available in 20 and 25mm header

M5 to F9 efficiencies

Metal or Plastic Frame

Silicon Free

Media Features and Technical Details

FILTRO PAC G is made up of high lofted micro-fine glass fiber media which ensures reliable performance throughout the filter life. The multi stage media design with coarse fibers upstream and micro-fine fibers downstream supported by the scrim backing enhances the overall efficiency of the filter in capturing the dust particles and increasing the dust holding capacity. The small fiber diameter and uniformity in arrangement results in low resistance to airflow and consistent filtration of sub-micron particles.

FILTRO PAC G provides extended surface filtration through media formed into individual dust holding pockets. These pockets are created by internal fales stitches to maintain uniform airflow channels for even dust loading and longer filter life. The perfectly balanced pocket design allows full media inflation without crowding or restricting airflow to ensure optimum media utilization and thereby offering long service life. Each pocket is bonded and sealed to its own "J" channel support frame which is fastened to a heavy duty corrosion resistant steel frame with soft edges to avoid damage to the filter media. This design prevents air bypass by eliminating metal contact points between components.

Note : Other sizes having filter face size 490 x 592mm operates at 80% airvolume and filter face 287 x 592mm operates at 50% of the air volume of 592 x 592mm. Pressure drop remains the same.

- Recommended Final Resistance : 250 Pa
- Maximum Pressure Drop - 450 Pa
- Maximum Operating Temperature / Humidity - 80 ° C / 100%
